SOURCE EVALUATIONS ARE DEFINITIVE. APPRAISAL OF CONTENT IS TENTATIVE.

1. The Nuclear Physics Institute near Prague may be seen from the main road between Prague and Kolin at kilometer markers 13 to 16. It is situated on a hilltop; it is possible to get an excellent view of the entire installation area by taking a side road leading to Podebrady which branches off from the main road.
2. There is no visible guard maintained and the area is not fenced off, with the exception of the transformer station, which is surrounded by a wire fence three meters high topped by barbed wire.
3. The construction activity which has been going on up to the present seems to have been concentrated mainly on the reactor hall and its adjacent laboratory and on the installation of power lines. Near to the reactor hall two large buildings have been constructed which, from their appearance, are probably machine shops. A side spur from the railroad line comes all the way into the installation area. The work on the installation seems to be going on at a normal work pace.
4. layout of the Nuclear Physics Institute.
